

Service description	Business Connect Standard 5G
Objectives	Superfast Business Internet connectivity
Service Delivery Type	Advanced Fixed Wireless Access to Premises (aFWA)
Service Offering	Business Connect30G, Business Connect50G and Business Connect100G
Service Delivery	The services are differentiated by download speed, provided as 30Mbps, 50Mbps and 100Mbps connections and are delivered over the air to the Business property's rooftop with AES encryption as standard. The device will be terminated with an Edge device that will give the business property an Ethernet internet presentation. This type of presentation will allow for a Firewall / Business Cable Router to gain internet connectivity via a Static IP which will be provided by Quickline Communications or a 3rd party Supplier.
Service Level	99.5%
Service Detail	The interface at the handover points will be presented via the following standards: Ethernet sub interface/VLAN Static IP
Service Demarcation	The Quickline Communications Limited demarcation point will be our Edge device marked as "QLE".

Deployment Scenario 1:

Business is directly connected to a core transmitter when a direct connection is possible.

Deployment Scenario 2:

Business is connected to a repeater which is then connected to a core transmitter via a Point to Point feed (with a maximum of 1 hop) when a direct connection to a core network node is not possible.

Connection Statistics

	Business Connect30	Business Connect50	Business Connect100
Download Speeds	30Mbps	50Mbps	100Mbps
Upload Speeds	10Mbps	20Mbps	40Mbps
Connection Latency*	<20ms	<20ms	<20ms
Connection Jitter*	<5ms	<5ms	<5ms
