

Wireless High Speed Internet

The Alternative Internet Service Provider

COVERING BOTH URBAN AND RURAL LOCATIONS

Independent wireless internet network service provider

Quickline are a true Internet Service Provider (ISP) with a wireless and fibre network which extends throughout Hull, East Yorkshire, North Yorkshire and Lincolnshire. Our network reach and the unique way in which we provision our service mean that we can provide Next Generation Internet Access to any business, anyone, anywhere.

Our solutions offer businesses and residential users the choice to move away from traditional, costly ways to connect to the Internet and transfer voice / data between sites at competitive prices. Many businesses also use our service to provide true resilience into their offices as our network is completely independent from other ISP's.

We uniquely offer high speed internet access to schools, businesses and homes in rural areas, as well as to urban areas.

We've been offering our services to satisfied customers since our launch in 2007. After a successful pilot in Scunthorpe and the surrounding area, we acquired the network belonging to Core (previously Azzuri) to facilitate rapid growth and we're currently expanding at 100 square miles per month. Our network is wholly owned by us and is built on leading edge, best of breed technology, approved by the National Security Agency (NSA).

Our highly skilled engineers are based locally as are our support staff - this means you enjoy local support, 24 hours a day, 7 days a week.

24-7 local support

EXPERT ADVICE BY LIVE CHAT, EMAIL OR PHONE.

Our network is monitored around the clock and is backed by an industry leading SLA with 24 hour fault reporting capabilities.

Business products

Our products and solutions range from Broadband-style services, through to alternative solutions to leased lines, both internet and point to point. We provide cost effective, high speed bandwidth, together with a fast and efficient installation.

Our lead times for installation are generally within 10 working days from receipt of order and our prices are fixed regardless

of your geographic location. Free 'around the clock' support is provided by our locally-based engineering and support teams; ensuring a quick and efficient resolution to any problem which may be encountered.

AIRFibre Business

High speed, secure and reliable internet connectivity based on a "Broadband" style service

Our secure, independent wireless network provides various high speed internet connectivity solutions, without the need for a telephone line, and removes some of the challenges which are often associated with traditional internet delivery, such as distance from BT or KC Local Exchanges.

With a cost effective installation, your business could be enjoying the benefits of high speed, reliable internet connectivity in less than 10 working days – even to the remotest of locations.

AIRFibre Elite

Cost effective, uncontended internet connections based on a "Leased Line" style service

In less than 10 working days, your business could be enjoying the benefits of AIRFibre Elite. Our flagship product offers businesses a cost effective, uncontended, guaranteed connection to the internet as a true alternative to Leased Lines or DIA (Direct Internet Access). A range of speeds and a flexible upgrade path ensure businesses can benefit from guaranteed bandwidth availability when they need it, without extensive lead times and unexpected delivery costs.

AIRFibre Links

Direct high speed links between two or more locations.

AIRFibre Links is designed for businesses with two or more locations that need data transferring quickly and securely between them, without the cost associated with fibre or VPN's. These connectivity options can be configured in a way that best suits each individual business, and offers the flexibility often required in the business environment. AIRFibre Links can be provided either to join separate buildings at the same site, or to connect remote locations together, and various speeds are available.

Broadband4Schools

Quickline provide a dedicated, fast, symmetrical internet connection to schools and to Further Education establishments.

The number of schools and colleges choosing Quickline is growing daily. Quickline's own CRB-checked engineers attend site to install the fully-managed service. Our network is supervised around the clock by our support team and problems are often detected before they are even noticed by the school.

Our state-of-the-art filtering system can integrate directly with the school's server if one is in place, ensuring optimum e-safety and flexible access levels.

Wi-Fi hotspots

Own-Brand Managed Hotspots

Pay As You Go broadband through Wi-Fi hotspots

Do you own a venue such as a pub or café, or need internet access for an event? If you want to be able to offer either chargeable or nonchargeable Wi-Fi to your customers, we can help. Quickline offer a variety of models and end-user payment methods, and can even create you a branded portal to complement the service.

Residential products

Our premium residential broadband service offers high speeds, coupled with unlimited download limits. Our service is backed up by free support which is provided by locally-based engineers and support teams. No telephone line is required and you are guaranteed fast speeds, even in rural locations. Choose from a permanent connection, or a Pay As You Go service.

AIRFibre Home

Residential Broadband Service

Our premium residential package is ideal for both urban and rural locations where traditional broadband is slow or not available at all. Within 10 working days, your home could be experiencing high speeds, with a wireless router installed at no extra cost.

Our residential service does not require a telephone line, potentially reducing your household costs. There are no download limits, ensuring that you can manage your costs without any unpleasant surprises

AIRFibre PAYG (Pay As You Go)

Wireless High Speed Connections
– pay for what you need

Our AIRFibre PAYG solution is perfect for home users who don't need access to the internet all the time. Pay for the connection of the service, and then choose from hourly, daily, weekly or monthly packages. Payment for the service is easy, through our online portal. This service is ideal for holiday homes, occasional users or anyone not wishing to commit to a longer term contract.

Our *Solutions*

Connecting Buildings

Direct links between locations

Whether you require a single link across a car park or road, or to join multiple sites, we have a full portfolio of highly cost effective products and services for businesses of all sizes.

There are no hidden installation costs, which can be associated with fibre provisions, and your speeds are guaranteed. Our services are fully secure, quick to provision and a cost effective way of transferring voice and data between your locations.

Connecting Business

High speed, secure and reliable

Superfast, reliable internet connectivity, even in rural areas, is available across your region right now. We offer a range of services from broadband style offerings, to guaranteed, uncontended connections. Our price plans are simple to understand, there are no hidden costs.

Temporary Connections

Flexibility for short-term solutions

Our coverage cloud allows the rapid installation of connections and the flexibility to offer short term solutions for applications such as building sites, shows, events, CCTV, temporary Wi-Fi zones and many more.

Connecting Communities

Community broadband schemes

Most rural areas in East Yorkshire and North Lincolnshire are already covered by our high speed AIRFibre network as are many of the surrounding parts of South Yorkshire, North Yorkshire, Lincolnshire and North East Lincolnshire.

Our services do not use a phone line, so are available far outside the range of local exchanges without a drop off in performance. Unlike other providers, we will work with new and existing community broadband schemes and sometimes will speculatively build networks where required.

CCTV & Remote Access

Temporary or permanent

Quickline's AIRFibre technology allows the rapid deployment of temporary or permanent CCTV cameras, access control or in fact anything that is or can be converted to IP. Instant connection to the Quickline cloud and flexible contracts mean a new deployment could be live in minutes at a fraction of the cost.

The scale of these deployments can be from a single camera connected to the internet, to large regional networks for public safety, in a highly secure private circuit back to a control centre.

Holiday Parks & Marinas

Flexibility deployment

The flexibility and ease of deployment of our products allow for both retrospective and new build deployment into holiday home parks, bringing the luxury of high-speed connectivity and phones with local landline numbers to locations without a phone line. We can have the direct relationship with the end user, or in some cases create a reseller package where park owners wish to purchase their own infrastructure.

For locations such as marinas and touring caravan sites we can offer a range of Wi-Fi options.

Connecting Schools

For school connectivity

Quickline acquired the Core Education network in early 2009 and with this an established schools network dating back to 2005. Building on this initial base, Quickline have established a bespoke service for both rural and urban schools, consisting of fast symmetrical internet, combined with a fully managed, secure and highly flexible content filtering service; with the added benefit that Quickline can offer high-speed services, even to remote rural areas.

Many schools benefit from Quickline services, achieving speeds far superior to what they previously achieved. This allows for video rich, online materials to be utilised in the school for the first time, all at a cost effective price.

Remote Plants & Renewables

Connecting remote areas

Quickline specialise in the provision of Internet and IP based services to remote locations and plant, with a range of flexible solutions available.

The monitoring and controlling of remote plant and equipment can be difficult and expensive. Wind turbines and pumping stations for example, are often out of the range of sufficient traditional internet connections.

However, our range of services is available even to the remotest areas. Connections can be made directly to the internet or as a private circuit to other parts of a network as required.
